

A Little About Us

We founded Emerald Harbor Marine in 1991 when Elliott Bay Marina opened its docks. Today, our projects range from installing and integrating a range of systems on super-yachts to simple rigging jobs on offshore sailing cruisers, and we treat each one with the same dedication and care.

Elliott Bay Marina is one of the country's premier marina's and is a perfect location for us. We have slips for our customers, and moorage is available for nearly any size yacht. Much of our work can be done at our docks. Sea trials can be done right outside our front door. Downtown Seattle is just minutes away by car or boat.

We have a great working relationship with Canal Boatyard, Pacific Fiberglass and Coastal Marine Engine. Most of our haulouts are done at Canal Boatyard, conveniently located on the Seattle Ship Canal in Ballard. Working with our longtime marine industry colleagues, every haulout, repair or installation on your commercial vessel or recreational yacht will be done expertly by specialists.

We have a woodworking, electronics and fabrication shop right in Ballard, so those unexpected bumps in the process can be expedited expertly and quickly.

Like safe navigation and seamanship, quality yacht service requires an awareness of a continually changing industry. We choose product lines only after extensive study and we ensure our technicians remain up-to-date with ongoing education. Technology changes daily in the marine world, and we feel it is part of our job to ensure our clients get the best products and services available.
